

MediConnect

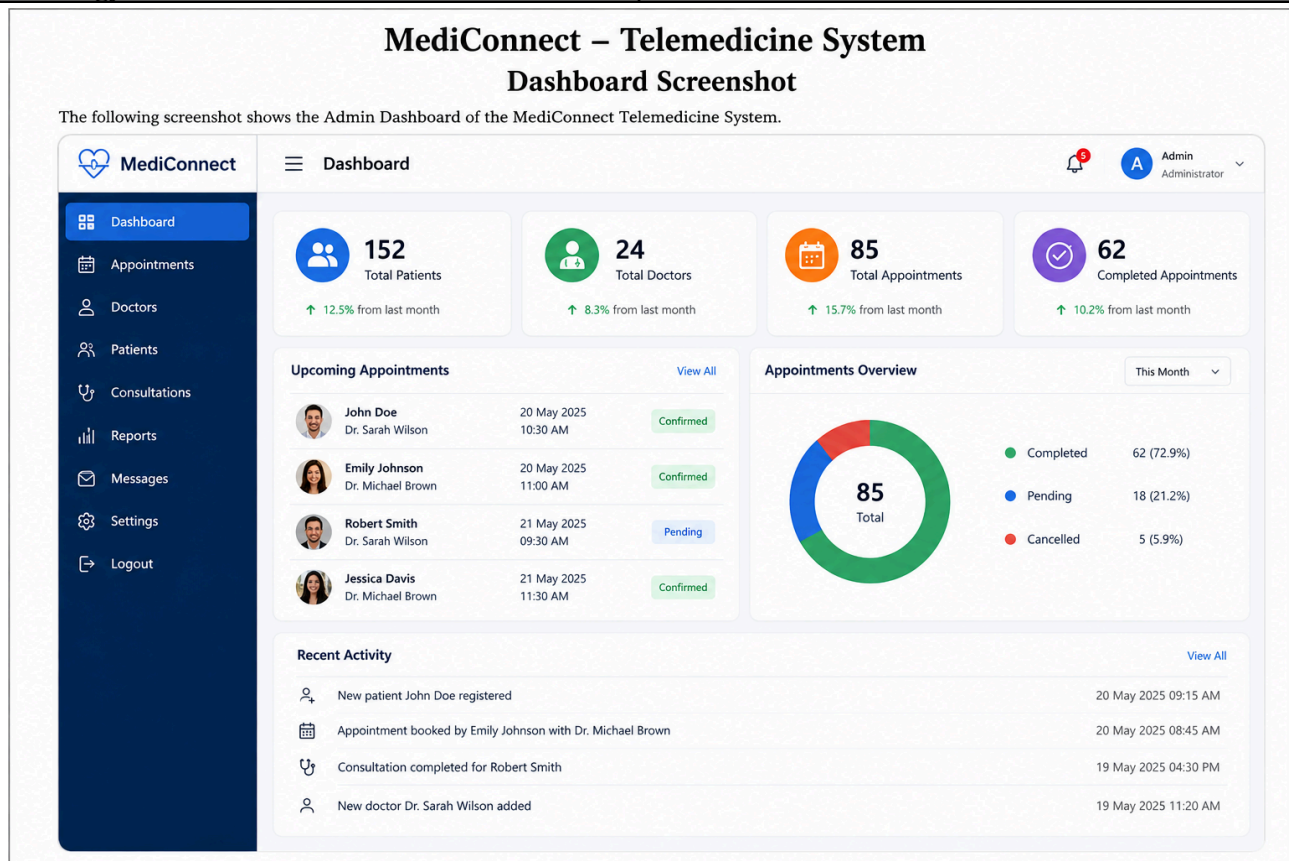

Full-Stack Telemedicine Appointment and Consultation Management System

1. Project Overview

MediConnect is a full-stack telemedicine web application designed to help patients search for doctors, book appointments, and manage consultations. Doctors can manage availability and appointments, while administrators can monitor users and system activity. The project follows Scrum principles to handle changing requirements in an organized manner.

2. Technology Stack

Layer	Technology
Frontend	HTML, CSS, JavaScript, Bootstrap
Backend	Python Flask
Database	MySQL
API	REST API
Tools	VS Code, Git, GitHub
Methodology	Scrum

3. Dashboard Screenshot

Figure 1: MediConnect administrator dashboard showing patient, doctor, appointment, and activity information.

4. Dashboard Description

- Total Patients – displays the number of registered patients.
- Total Doctors – displays the number of registered doctors.
- Total Appointments – shows appointments created in the system.
- Completed Appointments – shows successfully completed consultations.
- Upcoming Appointments – lists scheduled appointments.
- Appointments Overview – summarizes completed, pending, and cancelled appointments.
- Recent Activity – displays recent actions performed in the system.

5. Key Features

- Patient, Doctor, and Administrator authentication
- Doctor search and appointment booking
- Doctor availability management
- Appointment acceptance and status management
- Consultation and prescription management
- Patient consultation history
- Administrator dashboard and reports
- Responsive web interface
- Scrum-based backlog and sprint management

6. Relation to Problem Statement

The dashboard supports the Scrum-based telemedicine project by providing a centralized view of system activity. New requirements can be added to the Product Backlog, prioritized using business value and MoSCoW classification, and scheduled into future sprints rather than disrupting an active sprint.
